

## Settings for - Tools/Options/Connection

Anna-Karin Ettik Åsén - 2024-01-16 - Comments (0) - Information till nya användare

The **Connection** tab allows you to select settings for any HTTP proxy. It is fine to leave these fields empty if no proxy is used or if you are not sure what to fill in:

The screenshot shows a dialog box titled "Alternativ" with a red close button in the top right corner. The dialog has four tabs: "Visa", "Meddelanden", "Xml", and "Uppkoppling". The "Uppkoppling" tab is selected. Inside the dialog, there is a checked checkbox labeled "Använd autentiserad proxy för uppkoppling". Below this, there are three input fields: "Proxy serveradress (ex.:" with the value "http://proxyserver.firman.se", "Port:" with the value "8080", "Proxy användarnamn:" with the value "Username", and "Proxy lösenord:" with a masked password field. At the bottom of the dialog, there are four buttons: "OK", "Åbryt", "Verkställ", and "Hjälp".
